WOVEN IMAGE®

DESIGNED SPACE SOLUTIONS WITH ECHOPANEL®

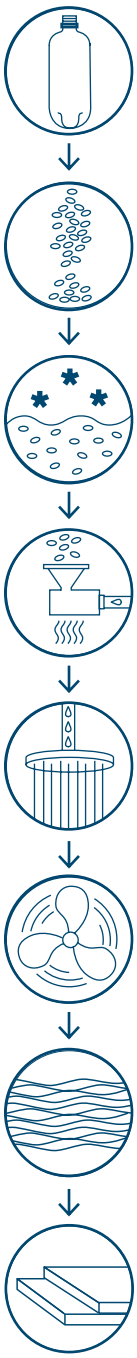
Space dividers are the semi-permanent features, that assist in creating and organising open-plan spaces - be it the classroom, office or even in a restaurant. Woven Image® has designed a collection of modular dividing systems made from the leading opportune product - EchoPanel® - to achieve the important characteristics for such systems; including sound absorption and by being a lightweight, agile material.

By using EchoPanel®, the interior space maintains a sustainably responsible standard. EchoPanel® is the leading, specialised contract material with top level fire ratings, but at the core of its ethos is also dematerialisation and recycling. EchoPanel® is made from up to 60% post-consumer waste sourced from recycled PET bottles. Impressively, in 2015 alone, Woven Image® saved in excess of 283 tonnes of PET plastic from going to landfills, repurposing this waste for EchoPanel® products. It's no wonder, then, that EchoPanel® can secure maximum credits under GECA's Green Star sustainability rating tool, as administered by the Green Building Council Australia.

A conscious aesthetic is everything and EchoPanel® comes in the largest range of colour options for ceiling-suspended space dividers such as the Pendents (made from EchoPanel® 12mm & 24mm) and free-standing space dividers made from EchoPanel® 24mm. Newly released additions to the EchoPanel® 24mm range mean that there are more options than ever for classic Woven Image® products: Paling, Platoon and Wrap.

Aside from effectively and efficiently organising a space, the products in this brochure can be easily adapted to immediately improve the sound quality in a space where privacy or improved acoustics is desired. Free-standing space dividers can be configured around workstations or break-out areas, granting more privacy. Ceiling-suspended space dividers can be added to a hotel lobby or broad area restaurant space, where intelligently designed division and aesthetic is required.

For more information about the products in this brochure or EchoPanel®, please contact your Woven Image® Account Manager or visit us online.



1. Soft drink and detergent bottles made from PET identified by ♻ are collected from consumers

2. Contaminents like lids and sticky labels are removed. Bottles are chipped into tiny pellets

3. Pellets are washed and sanitised

4. Pellets and colour are fed into a hopper. A heater at the base of the hopper melts the pellets to form a free flowing resin

5. Resin is pumped through a sophisticated shower-rose device, known as a spinneret

6. Cold air fans set the fine fibres extruded from the spinneret

7. Fibres are drawn and cut and are blended into a web

8 Web is compressed and cut ready for use
