High Performance Acoustic Booths

BUREAU

WWW.ORCASOUNDPROOFING.COM.AU

Architecturally Engineered

FEATURES INCLUDE:

- Honeycomb structure panels to distort and reduce sound levels by >32 decibels.
- Matrix ventilation system provides constant airflow while preventing sound emission.
- Plug-and-play technology.
- 3000K sensor lighting (CRI90+).
- Aerospace grade powder coated aluminium frames.
- Auto-sanitising option.
- Carbon polymer panels.
- 10mm thick tempered safety glass.
- Accessibility option on the Large and Extra-Large booth with auto sliding door and DDA compliant ramp.
- Customisable furniture configurations.
- Optional AI voice integration, LCD screens and smart speakers.
- Custom colour and branding options.

A welcome addition to any workplace

Take phone and video calls without disturbing co-workers.

Versatile to meet your company's changing needs

Four size options
from a single person
phone booth up to a
six person meeting
room.

Durable & Customisable

Nine standard colour combinations and endless custom branding options, all featuring an external protective skin that is highly resistant to friction, pollution, ultraviolet light, flame and moisture.

Configured & Furnished

Standard or custom layouts and furniture options available to suit any application including the commercial and creative workplace, podcasting and broadcasting or even sound and music production.

It's all in the details

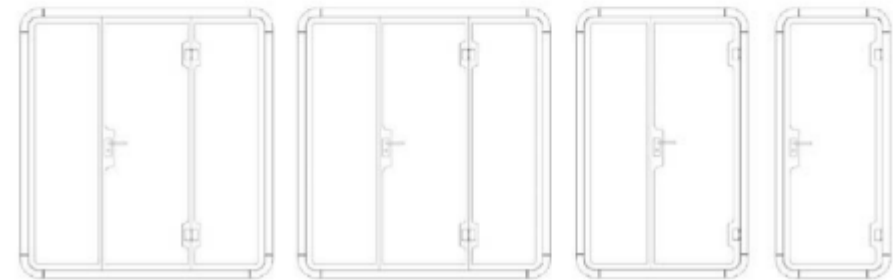

We use the highest quality materials and leading technology to provide a premium user experience and a product that will perform efficiently and effectively.

- Motion sensors for ventilation and lighting.
- Silent, high flow rate fans for ventilation— up to 127L/second.
- Acoustic panels that provide maximum performance while being simple to disassemble using magnetic fixings.
- Premium quality fixtures and fittings.

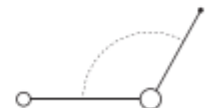

About Bureau

Bureau was borne out of years of frustration in the commercial workplace seeking a last-minute meeting room, searching for an office to take a confidential call, or simply looking for a quiet zone to focus on that important presentation.

This led a group of business consultants, architects and

industrial designers to join forces with one of the world's leading acoustic manufacturers with the objective to create stylish, architecturally engineered spaces for the contemporary workplace that are versatile, ergonomic and soundproof.

Environmentally Focused

Minimising our environmental impact has been at the core of Bureau's operation since inception. It's the primary reason we enjoy creating a re-usable and portable product that will not be discarded following a tenancy de-fit.

It's also the reason we utilise aluminium and glass as

the key components in the manufacturing of our booths - two of the most effectively recycled materials available.

We also recognise these values within our workplace, with each office operating on solar power and close to 100% of employees cycling to work at least once a week.
