INSTYLE

Ecoustic® Drift

Ecoustic® Drift is an acoustic tile that provides quality sound absorption and offers a sense of visual calm with its soft fluid lines.

Based on low energy manufacturing, Ecoustic® Drift is made from 100% polyester with a minimum of 50% recycled content and is recyclable.

The tiles are certified low-VOC and Greentag Level A Certified.

Available in 16 colourways, the versatile tiles are suitable for most interior spaces and easy to install onto walls, screens, partitions or ceilings.

Ecoustic® Infills increase sound absorbency by at least 30% and are available for all tiles.

Please refer to website for full product information, fire tests, CAD drawings and contact details.

Acoustic Information

Ecoustic® Drift provides an ideal design solution that reduces unwanted background noise. The tile will assist in absorbing, scattering and diffusing sound thereby improving the acoustics of the interior space.
